# dns resolv

- <https://groups.google.com/forum/#!topic/openresty/18ptEvBAbeo>

搞定了 是nginx的1.9.8默认是支持ipv6的dns查询 , 然而目标网站没有ipv6的记录所以无法拿到解析结果. Resolver x.x.x.x ipv6=off; 添加这个指令即可

By default, nginx will look up both IPv4 and IPv6 addresses while resolving. If looking up of IPv6 addresses is not desired, the ipv6=off parameter can be specified.

[http://nginx.org/en/docs/http/nginx\\_http\\_core\\_module.html#resolver](http://nginx.org/en/docs/http/nginx_http_core_module.html#resolver)
